Amendments to the claims

No amendments to the claims are made herein. This listing of claims will replace all prior versions, and listings, of claims in the application.

1-16. (canceled)

17. (previously presented) A method for selecting optimized transmission path in a television distribution network, the method comprising the steps of:

- receiving information relating to data to be transmitted to at least one set-top box, said information comprising metadata related to said data to be transmitted and an identification of said at least one set-top box;

- building a list of available transmission paths for the said set-top box; and
- selecting an optimal transmission path based on said list and said metadata; and
- transmitting the data to the set-top box using said selected transmission path.

18. (previously presented) The method as claimed in claim 17 wherein said metadata comprises information selected from a list consisting of: type of data to be transmitted, type of application that generated the data, type of application to receive the data, latency constraints of the data, or a combination thereof.

19. (previously presented) The method as claimed in claim 17 wherein said step of building further comprises the step of retrieving information related to said set-top box from a database.

20. (previously presented) The method of claim 19, wherein the retrieved information comprises information on available transmission paths and capabilities of the set-top box.

21. (previously presented) The method as claimed in claim 19, further comprising the step of querying the set-top box to obtain data indicative of available transmission paths thereto.

22. (previously presented) The method as claimed in claim 21, further comprising the step of querying the set-top box to obtain data indicative of available transmission paths thereto.

23. (previously presented) The method as claimed in claim 17, further comprising the step of querying said set-top box to obtain data indicative of available transmission paths thereto.

24. (previously presented) The method as claimed in claim 17, further comprising the step of getting information relating to network load and creating said list in accordance with the obtained load information.

25. (previously presented) The method as claimed in claim 17, wherein said step of selection is facilitated by a policy.

26. (previously presented) The method as claimed in claim 25, wherein said policy is modifiable.

27. (previously presented) A method as claimed in claim 17 wherein said step of building further comprises the step of retrieving information relating to load conditions in said distribution system, and wherein said list is constructed in accordance with said load conditions.

28. (previously presented) An apparatus for selecting optimized transmission in a television distribution network having a headend and a plurality of set-top boxes, the apparatus comprises:

a list creator, adapted to create a list of available transmission paths from the headend to a specified set-top box, or a group of specified set-top boxes; and,

a data route selector, adapted to automatically select the best applicable transmission path from said list for transmitting based on a policy applied to the combination of at least a data type to be transmitted and said list.

29. (previously presented) An apparatus as claimed in claim 28 wherein said list creator further comprises an information retriever module adapted for querying a data base for information regarding said set-top box capabilities and transmission paths available thereto

30. (previously presented) An apparatus as claimed in claim 29 wherein said information retriever module is further adapted to query said set-top box for information on available transmission paths available thereto, or the its capabilities, or a combination thereof.

31. (previously presented) An apparatus as claimed in claim 28, wherein said list creator further comprises an information retriever module adapted to query said set-top box for information on available transmission paths and capabilities of said set-top box.

32. (previously presented) An apparatus as claimed in claim 28, wherein said list creator is further adapted for retrieving information relating to network load and creating said list in accordance with the load information.

33. (previously presented) An apparatus as claimed in claim 28, wherein said list creator is further adapted to retrieve information relating to load conditions of said distribution network, and utilize said information in creating said list.
